Function

The Bihl+Wiedemann ASi Master for ControlLogix of Allen-Bradley has 2 ASi masters according to ASi-3 specification. A fast and easy commissioning can be accomplished with the use of two push-buttons and the display.

ASi I/O data and status information is mapped into the PLC processor's I/O data.

ASi Scope

Diagnostics, which go far beyond the standard diagnostics facilitate the simple detection of the occasionally occurring configura-

tion errors and further irritations towards the ASi communication. So in case of an error the down time of machines can be minimized or you can initiate preventive maintenance.

Commissioning and monitoring

The ASi Master can be commissioned respectively programmed with the help of the software ASi Control Tools360 (BW2902). Commissioning, debugging and setting up the system without the software can only be accomplished with the use of two push-buttons, the display and the LEDs directly on the system.
